Additional Information – Score Summary	
<i>\$.report.additionalInformation.scoreSummary</i>	
Credit Information Score	Credit Information (CI) is a general measurement of the positive and negative characteristics of a commercial credit file as it relates to delinquency risk. It measures seven attributes that can appear in an Equifax credit report. A low CI value indicates that these attributes are mostly positive and suggest that this company has a positive credit history. There are two special values. For companies where there is no information, the CI value of 20 is returned. For companies with information from the Superintendent of Bankruptcies, the CI value is set to 70 as an alert to customers.
<i>.creditInformationScore</i>	
Credit Information Score Description	Description of the risk level of failure based on CI score
<i>.creditInformationScoreDescription</i>	
Payment Index Score	The Payment Index (PI) is a numeric measure of the businesses payment habits, and is calculated strictly on the distribution of the total owing amounts across the aging periods in the 90 days immediately preceding the day the report was ordered. The Payment Index ranges from 0 to 99. The closer the company scores to zero, the better it is at paying the creditors reporting to file. A zero PI score would indicate all reporting creditors are paid within terms. A PI score of 99 indicates that creditors are being paid in the third period past due or longer. This index is similar to days beyond terms.
<i>.paymentIndexScore</i>	
Commercial Delinquency Score	Predicts the likelihood of severe delinquency, charge-off, or bankruptcy on any account within 12 months. The CDS score ranges from 101 to 662 where a high CDS score indicates a lower probability of delinquency. If customers do not subscribe to CDS, the CDS Risk Class is returned, with a value of 1 to 5 where 5 indicates the highest scores.
<i>.commercialDelinquencyScore</i>	
Commercial Delinquency Score Description	Commercial Delinquency Score (CDS) comes with four Reason Codes which help explain the score. The Reason Codes correspond to the attributes in the model that most greatly affect the score.
<i>.commercialDelinquencyScoreDescription</i>
