# Company Report & Data Updates

## **Paid Late/Paid on Time**

We have improved the logic and data handling behind the Paid Late and Paid on Time indicators to ensure more accurate and consistent payment performance reporting across supported countries. These updates provide clearer payment behaviour signals within company report data and related enrichment fields, improving reliability for downstream decisioning and analysis.

## **Data Cleaning**

### **Expanded Country Coverage for Enrichment Fields**

We have increased the country coverage across a number of Data Cleaning enrichment fields, enabling customers to access a broader range of data points across additional international markets.

As part of this enhancement, we have updated the available country codes for selected enrichment fields to improve global data availability and maximise enrichment success rates.

### **Establishment Date (Incorporation Date) Country Coverage Expansion**

We have expanded the country coverage for the Establishment Date (Incorporated Date) enrichment field in Data Cleaning. This field is now supported across additional country codes, enabling more records to be enriched with verified incorporation dates and improving company age and longevity analysis across international portfolios.

### **Company Status Country Coverage Expansion**

The Company Status enrichment field is now available for additional countries in Data Cleaning. This enhancement increases international coverage and allows more records to be enriched with standardised company status values (for example Active, Closed, Liquidated where available).

### **City Country Code Expansion**

The city field now supports enrichment in the additional countries:

- Austria (AT)
- Switzerland (CH)
- Greece (GR)
- United Kingdom (UK/GB)

## **Matching & Classification**

### **SIC Code Manual Matching Correction**

We have corrected an issue affecting manual SIC code matching, where selected values could return incorrect or misaligned codes. Manual matching now returns the correct SIC code values, ensuring more accurate industry classification when users manually select or override SIC mappings.

## **Upgrade Installation**

To install the new package, please click on the appropriate link below and follow the instructions.

- Install Link for Sandbox: <https://www.creditsafe.com/salesforce/sandbox/install.html>
- Install Link for Production: <https://www.creditsafe.com/salesforce/production/install.html>
